

Deployment made simple

Onboarding is quick and hassle-free

Once you bind your HDVI Shift™ policy, we set you up to start using our safety tools to take control of your business and your insurance costs. From setting up telematics to training on the safety tools provided to you, we work with you to customize a deployment plan and schedule to meet your operational needs.

1

Set up your telematics

The HDVI team will help you specify the right gear if needed, and then get the systems connected to the HDVI cloud so we can begin analyzing your data.

2

Get set up & trained on safety tools

HDVI Fleet Services trains you on the fleet portal tools, dashboards, and reports you will use to monitor fleet and driver activity and coach drivers.

3

Use your new tools to improve safety & increase discounts

The HDVI team will help you set goals, benchmark safety metrics, and engage with drivers to gain more control of safety and operations.

Fast, easy, deployment process

Deployment is easy and can be accomplished within thirty days, but may take longer if ELDs or dash cams need to be installed. We work with you to develop a deployment schedule that meets your operational needs.
