Driver Coaching Dashboard
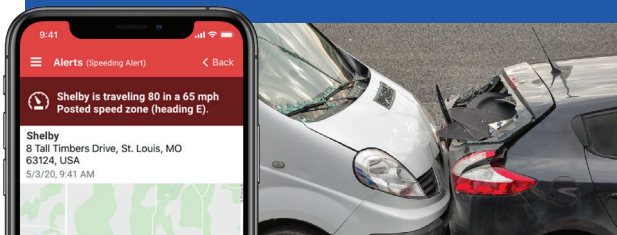

Safety Starts Here

Linxup's **Driver Coaching Dashboard**, an integral part of our *Safety Solution*, empowers you to proactively reduce risk. As the foundation of your safety program, it helps you identify unsafe driving patterns and track improvements over time.

An effective safety program relies on quick access to driver performance data and clear, actionable insights. As a business leader, you don't have time to sift through hours of video footage or alert data to pinpoint your team's safety challenges.

Your dashboard helps you quickly uncover key risks by highlighting safety trends and coachable moments. You'll know instantly when a reward is due or coaching is required. Review video footage of the most egregious events, and document driver discussions — all within your account, providing a seamless coaching experience.

The average vehicular crash costs an employer around **$24,000**. If there is an injury, that number can jump to **$74,000** and to over **$670,000** if a fatality is involved. [1]

Key Features:

Safey Trends: Showcases fleet and individual driver performance over time helping you to quickly assess risk and address problem areas (harsh braking, speeding, phone use, etc).

Coachable Safety Insights: Displays your highest and lowest performers for each risky driving behavior detected, guiding you to focus on coaching or rewarding the right drivers, based on their driving record.

Coaching Session Notes: Document discussions with drivers during coaching sessions to stay organized and help enforce your safety program.

Key Benefits:

Streamline Your Safety Program

Improve Employee Retention

Simplify Your Work Flows

Reduce Costly Accidents/Insurance Premiums

> " The Driver Coaching Dashboard is super useful and has helped us to keep track of what coaching we've done. "
