## Reliable Protection for Safer Fleets.

The AI-powered 4G linxCam dash camera, with driver- and road-facing cameras, features an unsurpassed focus on real-time driver and vehicle safety. The linxCam elevates any safety program by helping prevent accidents while providing real-time, in-cab safety insights of the road, vehicle and driver.

The road-facing camera detects potential dangers, such as tailgating, and an in-cab 'record video' button allows drivers to capture custom clips when needed for added protection.

The driver-facing camera identifies risky behavior that can lead to accidents, such as cell phone use and not wearing a seatbelt.

### Improve Driver Safety

- Identify and coach the riskiest driving behaviors in real-time within the cab such as tailgating, phone in-use, and no seatbelt detected.
- Take corrective action when other unsafe events occur such as speeding, rapid acceleration, and harsh braking events.
- Decrease night trip risk with night vision (*accidents are 3x more likely to be fatal*).

### Decrease Costs and Liability

- Lower insurance costs with fewer incidents.
- Reduce liabilities with video evidence that exonerates drivers.
- Reduce insurance claim resolution times with video evidence.
- Reduce fuel consumption and wear & tear on vehicles.

### Streamline Your Safety Program

- Use Linxup's Driver Coaching Dashboard to know when to reward good driving performance or initiate coaching.
- Document discussions with drivers during coaching sessions to stay organized and help enforce your safety program.
- Create a culture of safety with your team.
